

Healing Oceans Family Wellness Center

is pleased to announce a partnership with

Thermographic Diagnostic Imaging (TDI)

to offer Thermography

Starting on Wednesday, May 29, 2013

Thermography gives readings on breast health
without radiation.

It uses state of the art, FDA approved infra-red technology to detect physiologic changes in the breast tissue that have been shown to correlate with cancerous or pre-cancerous states, without compression or radiation of the breast.

Earlier detection:

Since thermal imaging detects changes at the cellular level, studies suggest that this test can detect activity eight to ten years **BEFORE** any other test.
